

Report from SCAPECA , the NUF collaboration group on penile cancer 2019

Following the NUF 2013 in Sandefjord, the five national urological associations appointed two members from Norway, Sweden, Finland & Denmark and one member from Iceland to participate in the NUF collaboration group on penile cancer. The group has had different meeting activities in Copenhagen, Malmö and Helsinki during the first five years. Lately, activity in the group has been markedly reduced. However the power of collaboration and an increased critical mass seems truly meaningful for a rare entity like penile cancer, and SCAPECA has the potential to increase its importance and impact in the future.

Jakob Kristian Jakobsen, Chairman
